Introduction

StorVault Endpoint is a Cloud-based data backup and recovery service designed to enable organisations of any size to safeguard data created on desktops or laptops. Based on industry-leading data backup and recovery capabilities and a world-class in-country Cloud storage facility, this endpoint service is designed to address the needs of all users – from a sole proprietor working from home to enterprises faced with a widely dispersed mobile workforce operating from frontiers without borders.

The challenge

More than any other class or category of information, data created on desktops and laptops is extremely vulnerable to a virtually limitless range of potentially fatal or highly disruptive threats.

Vulnerabilities include:

- Accidental deletions and overwrites.
- Laptop loss and theft
- Ransomware or other malware infection.
- Hardware failure

The solution

StorVault Endpoint service plans protect against virtually all common data loss scenarios as well as the challenge of taking control of explosive growth in data proliferation by providing all-round endpoint data protection for business data.

It protects laptop or desktop data within minutes of installation with minimal impact on resources being consumed on the device. The backup service is simple to deploy and provides intuitive self-service recovery.

The service reduces risk, increases visibility, and improves employee data access. It runs effortlessly on desktops and laptops across the internet from any location with built-in self-service and automation tools so that files can be backed up according to a pre-defined automated schedule and retrieved and recovered without expert IT support or any other skilled intervention anywhere at any time.

KEY FEATURES

- Cloud connected backup and restore with no additional hardware needed.
- Web console enables secure anywhere, anytime access to all backup data.
- Automated backups with self-service restore.
- Backup data is always online and accessible.
- Easily recover files, folders and complete systems.
- Secure data encryption at source, in-transit and at rest.

KEY BENEFITS

- Simple to install and configure and a breeze to use with intuitive self-service recovery.
- Policy controlled backups that don't interfere with end user productivity.
- Internet-optimised incremental backups with compression and de-duplication to minimise bandwidth usage and reduce device resource restrictions.
- Enhanced risk management, corporate governance and legal compliance standards based on the in-country data sovereignty status of the StorVault Cloud.

SPECIFICATIONS AND TECHNICAL SUPPORT

- Licensed per User and backup capacity
- Support for up to 3 devices per user
- Windows, Mac and Linux Support
- File Protection Categories include Desktop, Documents and Pictures folders, Office and Image file extensions.
- E-mail support provided 24 x 7 x 365 with a response time of between 12 and 24 hours: Mail: support@storvault.co.za
- Telephonic support provided between 09h00 and 16h00 from Monday to Friday: TEL: **011 848 7063**

COMPATIBILITY AND CONFIGURATION

Highly flexible and easy-to-implement compatibility and configuration options to help guarantee full control over all backup and recovery requirements according to user-defined needs such as data retention periods and file and data types. Limitless scalability with user licensing and storage capacity increases at value-for-money pay-as-you-grow rates.

The Online Backup and Recovery Service at a glance

The StorVault online backup and recovery service is initiated by a StorVault software agent that is downloaded and registered on a target device via a web portal according to a user-selected service plan. Once installed the selected service plan agent will provide a pre-configured, highly-automated backup routine designed to ensure that all data destined for backup is transferred over the internet to StorVault's purpose-built, highly-secure, Cloud storage facility in South Africa.

The service features an easy-to-use, highly configurable single web console with user access control that enables key functions such as routine monitoring and detailed reporting on all backup activities.

Access to and recovery of all backed up data is facilitated through the web console by simply navigating to the recovery point via the intuitive interface, selecting the files or folders to be restored and clicking restore. All restore requests can be performed to either the original location or an alternate destination or device and can be performed from anywhere at any time. Backup data is encrypted during the backup, in transit and at rest in the StorVault Cloud.
